

Week 11:

Learning Materials: Streams and File

Task 1:

See example `empl_io.cpp` on page 608 of the reference book. Go through the explanation of the code. Write the code and see the output.

Task 2:

Take an example from the previous lab or you can make up your own example where multiple child (min 2) classes are derived from the same base class. Use the previous approach to read and write to file. That is using one file for storing the information of all child classes objects.
